- Close all applications and make sure your files are saved
- Open File Explorer
- Enter %TMP or %TEMP% in the Address Bar
- This should take you to a file path similar to C:\Users\Scott\AppData\Local\Temp
- Remove the data in this folder (or rename it to Temp2 if you want to keep it around)

• Go to C:\Windows\Temp to remove the global temp folder, if that is needed

Caution

• Deleting temp files is safe, but if Windows OS shows a popup indicating that the file is in use, then do not delete that file because an open app is using that temp file
