Creating a Schedule in the Ruby Mobile App

If a Ruby device does not have a schedule uploaded to it from EDM RCM, it can be created in the mobile app and uploaded to the Ruby.

Go to **RCM** on the main page then **Schedule** then **Create New Schedule**.

This will create a **Schedule 1** that can be tapped on to edit various settings. For more details regarding the settings, see **RCM** > **Schedule**. After editing the settings, back out and tap on **Write Schedule to Ruby** to upload the schedule.
