Downloading Files from the Ruby to RCM

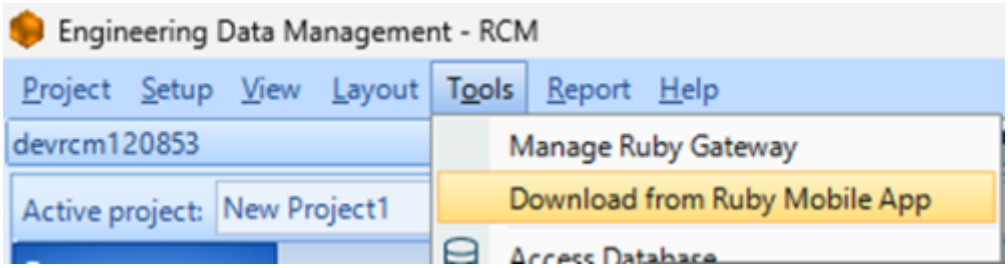

To transfer locally downloaded files from the phone to RCM, follow the instructions on the **Transfer to RCM** page.

Turning the **Enable Transfer** option on will automatically set the IP address from the Wi-Fi connected to the phone.

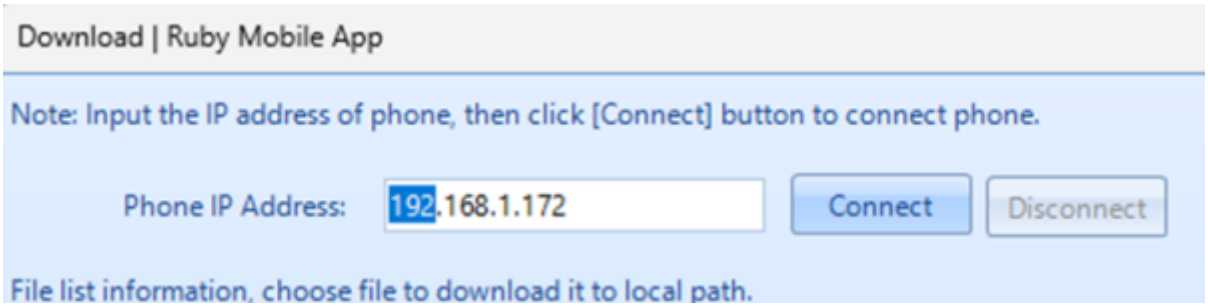

The phone does not need to be connected to the PC via a USB cable.

Open RCM and navigate to **Tools** > **Download from Ruby Mobile App**.

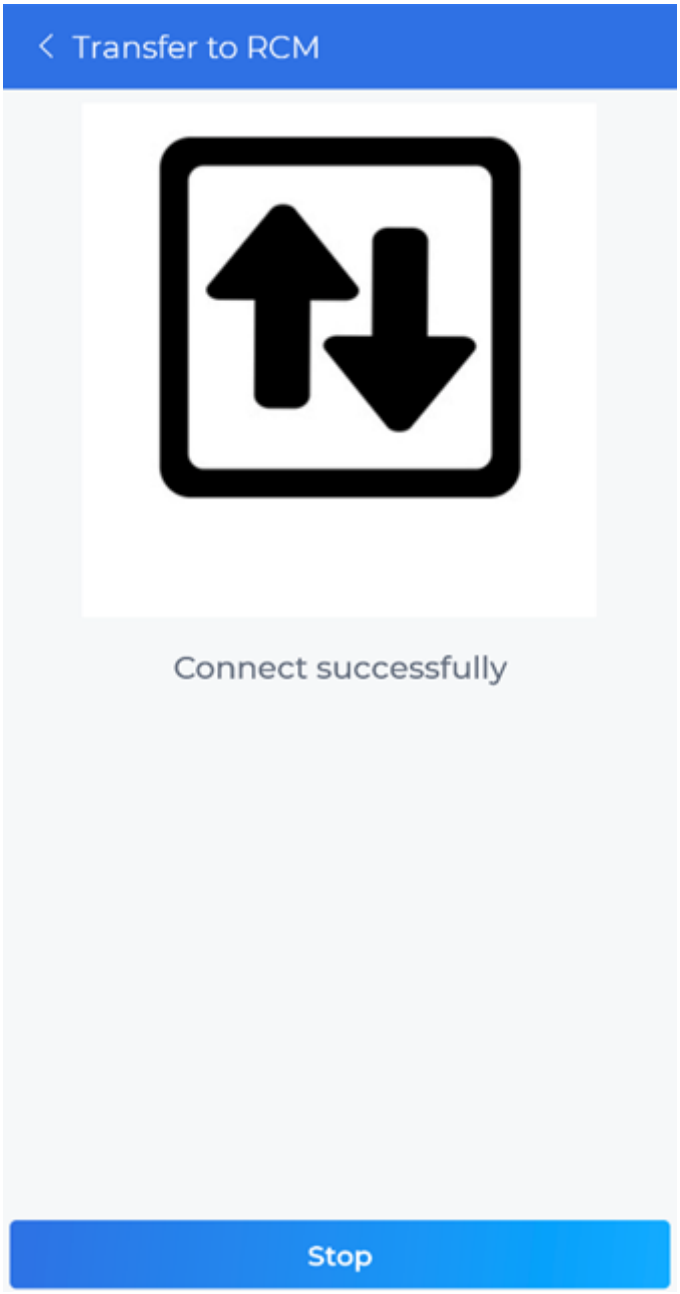

Type in the phone's IP address then click **Connect**.

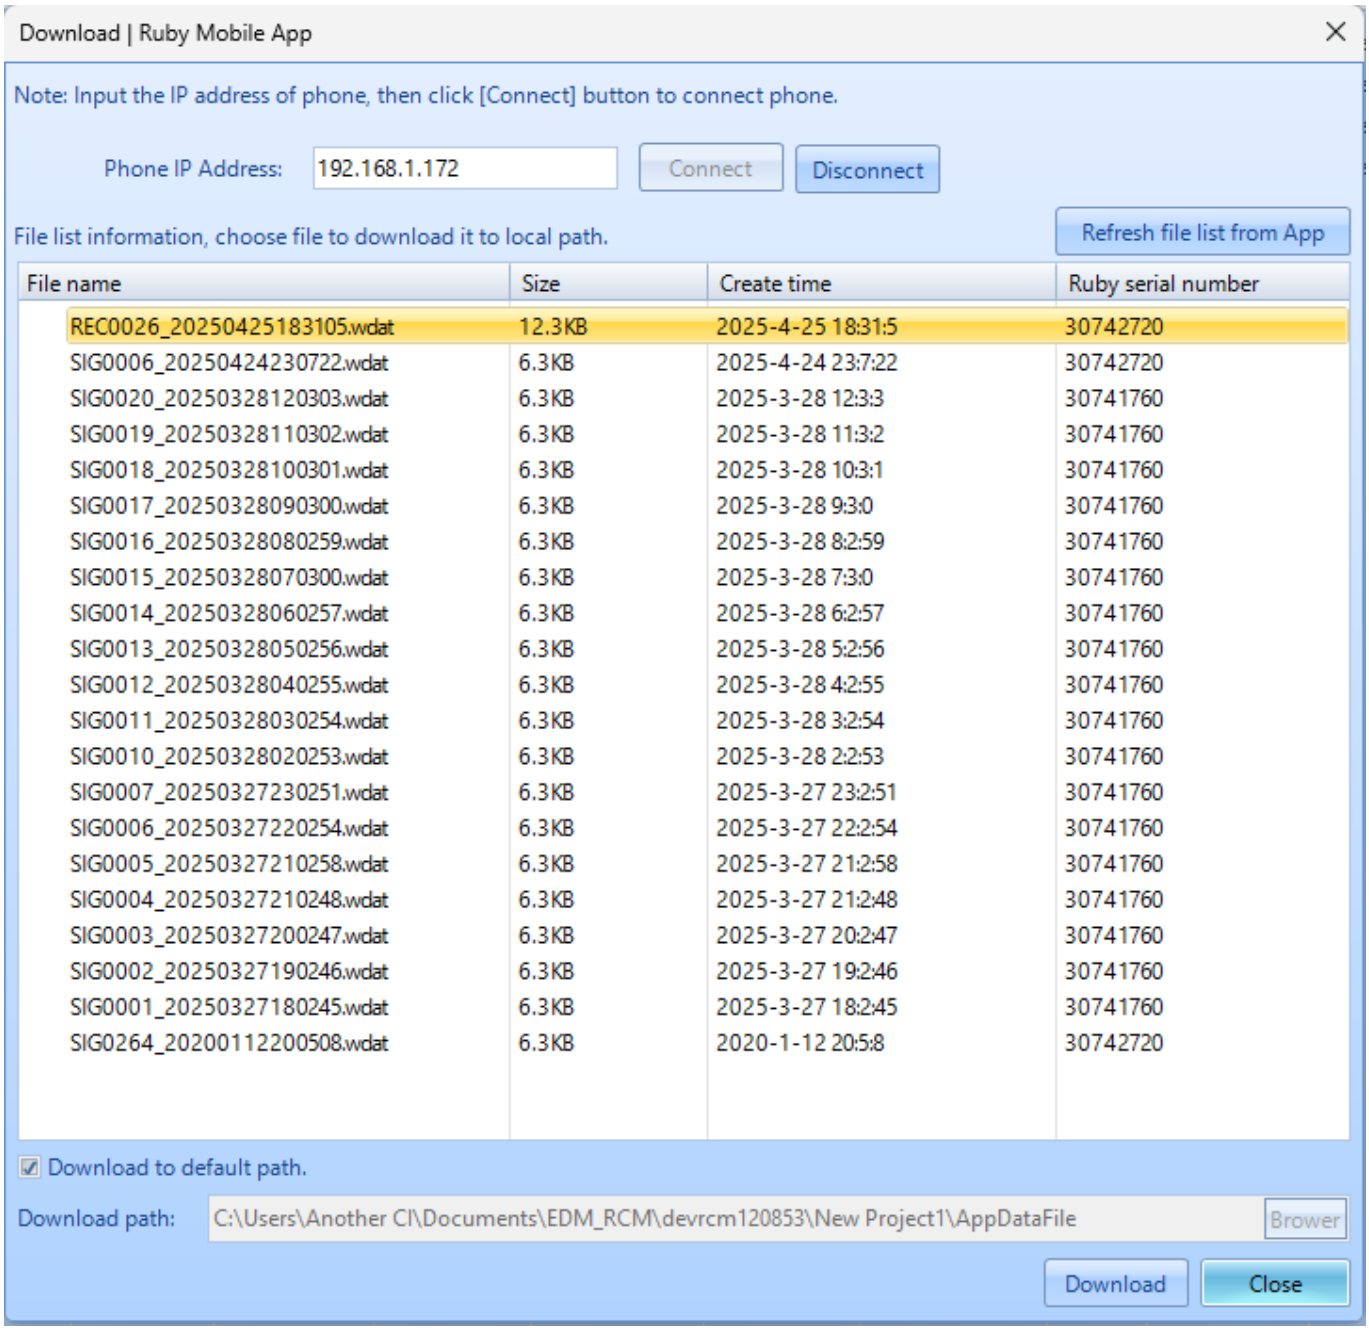

Eventually the ruby mobile app should display the following image to indicate the phone is connected to RCM.

If the phone does not connect, then change the PC Wi-Fi adapter or the phone's IP address to match each other with 192.168.1.xxx.

Once connected, RCM can grab the list of files on the phone and download them to RCM.
