

Import Profile into EDM-VCS

In many cases, the breakpoints for a desired test profile will be contained in spreadsheet. This can be easily imported into EDM-VCS. Follow these steps to do this.

- 
- 

- Go to **Setup** → **Test Configuration** → Test Profile
- Select **Import/Analyze** then **Import from CSV**

RMS (g): 1.00063 Scale RMS

LogMag g^2 / Hz

	Frequency Hz	Acceleration g^2/Hz		High alarm dB	Low alarm dB	Low abort dB
▶ 1	20	0.000273233		3	-3	-6
2	80	0.00108776		3	-3	-6
3	350	0.00108776	6	3	-3	-6
			-3			
4	2000	0.000191497	6	3	-3	-6

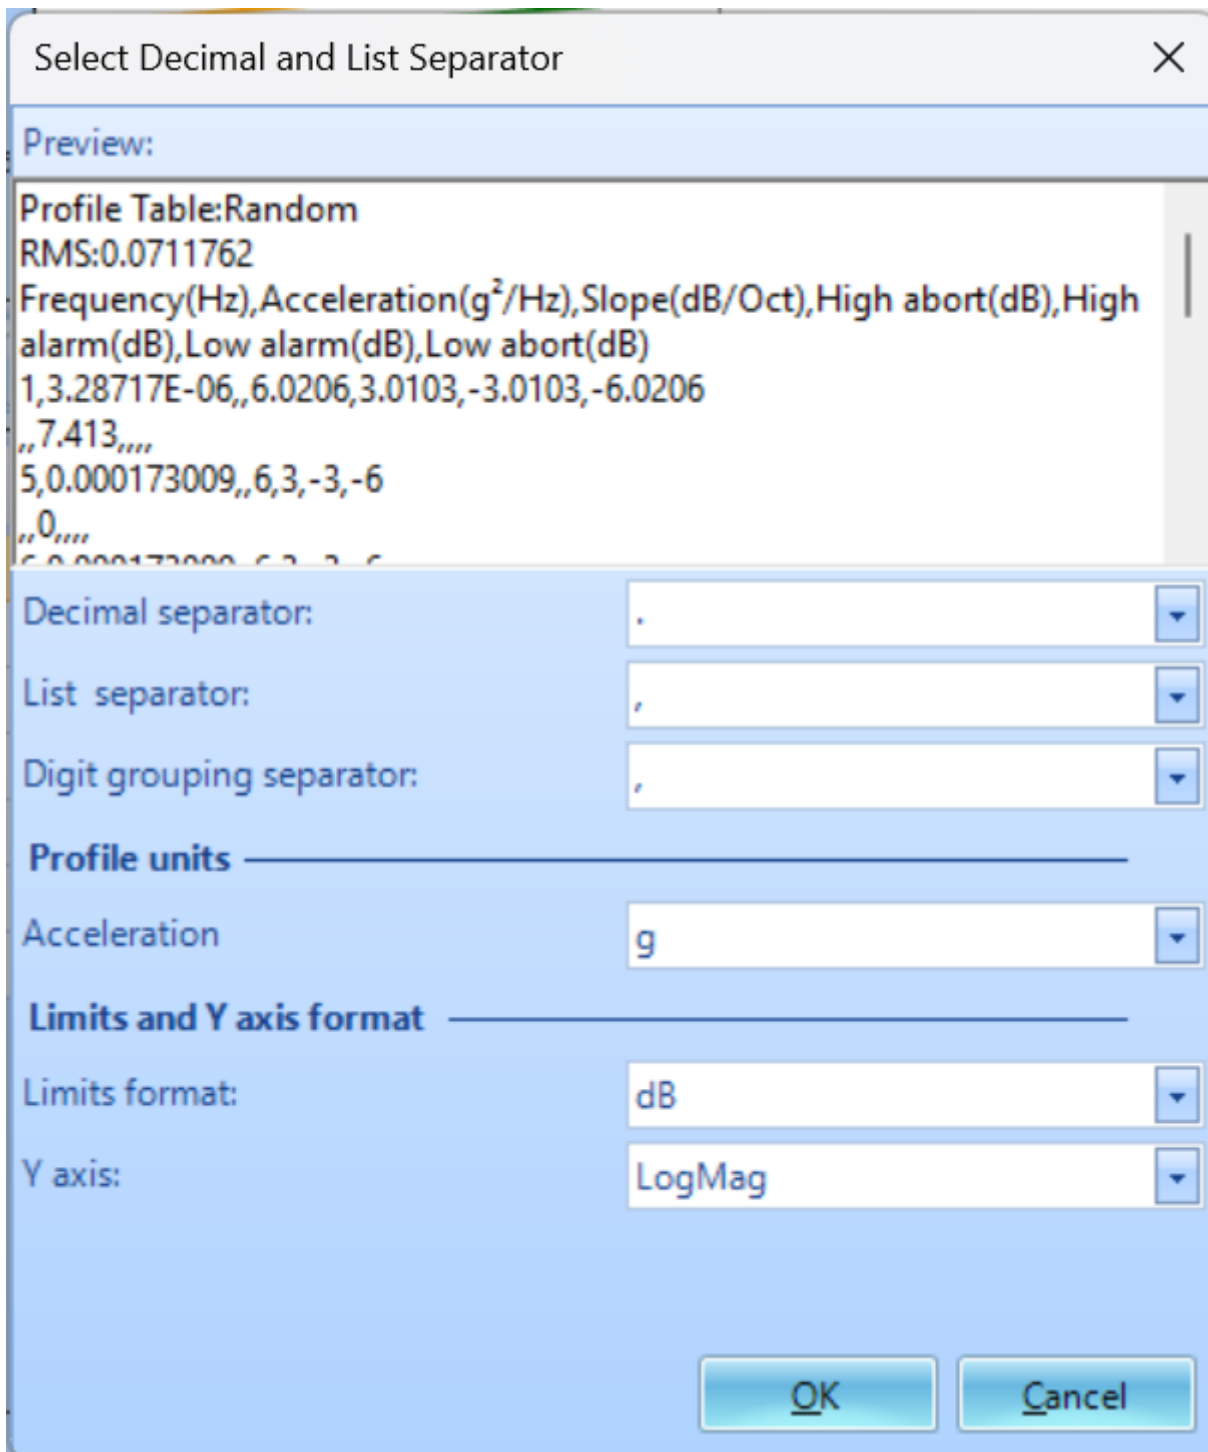

Limit format dB Slope unit dB/Oct Tolerances

To calculate the cross-over breakpoint, enter "?" in any breakpoint line.

Load from library Save to library

Config. library OK Cancel

3. Find and select the .csv file containing the profile
4. Make sure that the formatting is correct. Press **OK**

5. The profile will now be imported into the software
