

# VDS Machine Builder

## Machine Structure

===Machine Class===

The machine class represents the full model of the machine. Includes RPM and speed variation

information. Automated diagnostics are run at the machine class level

## Composites

composites are composed of several components and are used for inter-component issues i.e. pulleys and gear compressors.

===Components===

collection of elements on a single shaft

===Elements=== a mechanical part i.e. bearings, fans, and motors
